

Now protect all your most valuable assets!

Turf Screen CREW is a broad spectrum SPF 30 sunscreen designed specifically for outdoor professionals. The convenient one-gallon jug is ideal for protecting large maintenance staffs from dangerous UVB and solar radiation. The harmful effects of excessive exposure to UVB and sunlight are well known and have been recognized as a primary cause of skin cancer, basal cell carcinoma and melanoma. Furthermore, both the World Health Organization and OSHA have recognized UVB and sunlight as dangerous and a human carcinogen.

Outdoor professionals and golf course employees are exposed to dangerous levels of UVB radiation and sunlight. While most employers take their employees' safety seriously, many do not consider UVB protection a dangerous problem. It is time to reconsider. Clearly, UVB and sunlight protection ought to be included in any employer-sponsored safety program and serious consideration should be made to providing employees the protection they deserve. After all, your CREW is your most important asset!

Try a gallon of TS CREW today and find out how effective, convenient and affordable it is. Your CREW is worth it!
